

# HUMAN CENTERED DESIGN

**PROCESS BOOK**

# OBJECTIVE

The purpose of this project was to use our design skills to benefit humanity. We looked at local groups, businesses, and individuals that might benefit from a group of designers willing to help. After choosing a design problem, we accessed their needs through research and interviewing to come to an effective solution.

Acumen's Human Centered Design took a four step process to create innovative solutions to real-world challenges.

- Building an effective interview guide to document our user research.
- Gaining strategies for synthesizing our user research and identifying opportunities for design.
- Practicing creative techniques to build rapid prototypes and make our ideas come to life.
- Effectively testing our prototypes with real users and identifying solutions to begin implementing.

**THE BEST CREATIVE  
SOLUTIONS DON'T COME  
FROM FINDING GOOD  
ANSWERS TO THE QUESTIONS  
PRESENTED... THEY COME FROM  
INVENTING NEW QUESTIONS!**

# RESEARCH

## DEFINING THE PROBLEM

After evaluating local issues based in Jonesboro, we chose to focus on childcare resources when deciding on a problem to tackle. When researching, it became clear we would be well suited to help Arkansas State University Child Research and Development Center with their outreach in the form of a website update.

## DESIGN CHALLENGE

How might we connect students who are also parents with childhood care resources at Arkansas State?

There is little information for student parents to access child care resources on campus. It can be hard to find reliable, affordable, and convenient childcare. Balancing parenting with schooling can be a daunting task. There is a lack of information when searching for on-campus childcare, with the only resource being a confusing website.

As part of this challenge, I worked with my team to design solutions that will provide easier access to childcare and better information outlets for student parents, therefore easing the strain of finding childcare/balancing parenting with schooling.

## RESEARCH OUTLINE

- Interview Guide
- Conduct Research
- Define Team Knowledge and Assumptions
- Planning Design Solutions

# INTERVIEW QUESTIONS

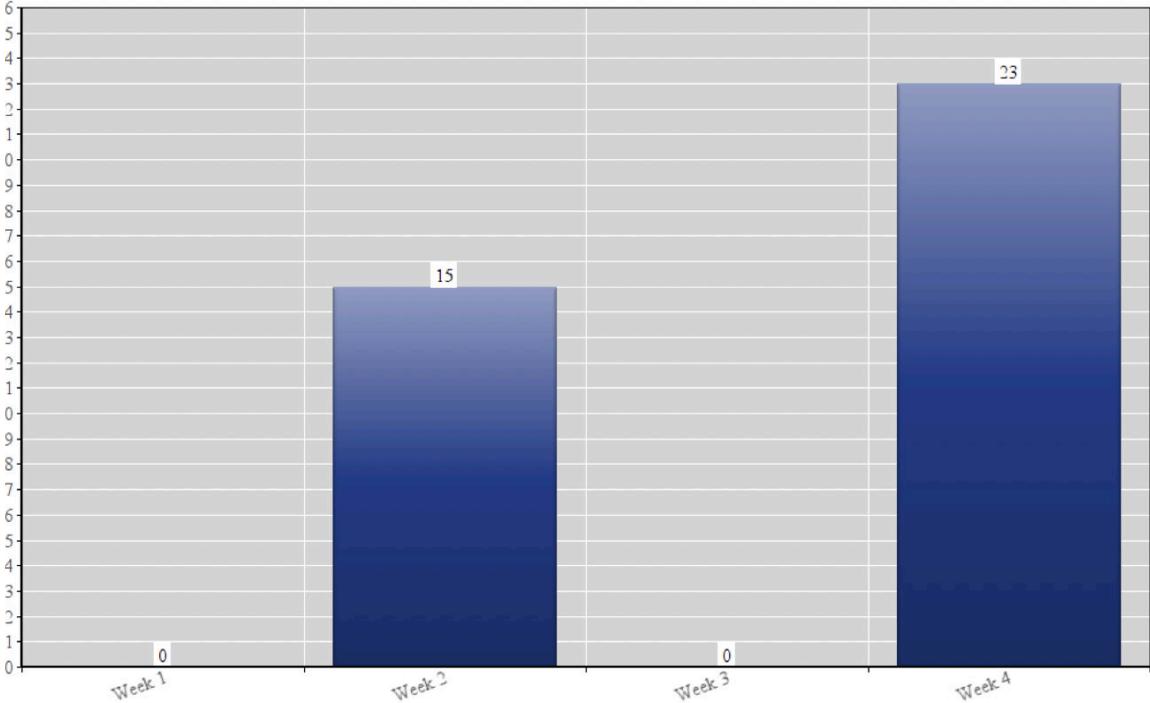

### Questions for Parents:

- How many kids do you have?
- What is your current child care resource?
- Have you ever been offered on-campus childcare?
- If so, how was your experience?
- If not, would you consider it?

### Questions for Experts:

- How long have you been a childcare provider?
- What services do you provide?
- What are your hours of operation?
- Who is your intended market?
- Is there a waiting list for a child to attend?
- How would you improve your system?
- Who should we talk to next?

# INTERVIEW NOTES

**WHEN YOU LISTEN, IT'S  
AMAZING WHAT YOU LEARN.  
WHEN YOU ACT ON WHAT  
YOU LEARN IT'S AMAZING  
WHAT YOU CAN CHANGE.**

# IDEAS

## POST-INTERVIEW PROCESS

We got in touch with people who would benefit from childhood resources and some experts who work at the facility. After conducting several interviews using our questions, we compared and connected experiences throughout.

## IDEA OUTLINE

- Answer- How might we solve this?
- Create several design solutions.
- Choose a solution.
- Brainstorm and create a narrative to visualize how this may work in the real world.

## SCENARIO PLANNING

Our team discussed variations of similar solutions. We created different narratives to visualize how these options might be useful to Arkansas State University Child Research & Development Center and those who use its resources.

# SOLUTION VARIATIONS

**Part 4**

**Design Challenge** - advancing the opportunities for the Childhood research center

**HMW question** - How might we better distribute information about the center?

**Describe the idea** - updated website to show all the programs they offer, activities they do, volunteer opportunities, & grants/donation options. also updated ~~staff~~ staff

**How will this idea have impact on the challenge we're addressing** - It will help people learn more about their services & staff. Not many people know that this was open to the community so updated info would be beneficial.

**Design Challenge** - advancing the opportunities for the childhood research center

**HMW question** - How might we better promote the center?

**Describe the idea** - creating social media pages to promote the center will ~~will~~ increase awareness more awareness in the community will allow for more involvement & opportunities for those who benefit from the center.

**How will this idea have an impact on the challenge**

**new website**

**Google**

childcare in jomboro

ACM Research Center

**Title: The Person**

name: Jack & Jill  
Age: 28 & 29  
profession: Student & comedian

**Awareness**

Google

childcare in jomboro

ACM Research Center

Jill googled for childcare in the local research website came up

**Initial Interaction**

**new website**

Jill clicked on the link & began looking at the website. She notices the section about the programs offered.

**Gathering Information**

"do I qualify?"

Jill finds the phone # in the contact info section. She calls to see if her kids qualify for any of the programs offered.

**Social Media**

Twitter Tweet!

**Signed up!**

Jill finds out her kids qualify for one of the programs so she puts her name on the waiting list. The kids get accepted.

**[word of Mouth]**

Jill is happy with the childcare services & tells her friends to check out their website to see what all they offer.

**THE GREATEST SUCCESS  
WE'LL KNOW IS HELPING  
OTHERS SUCCEED & GROW.**

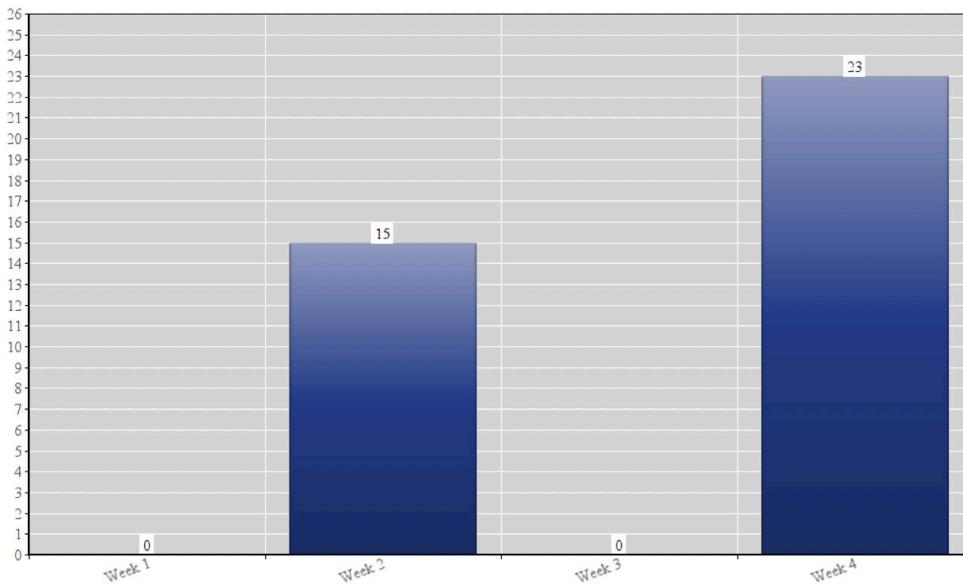

# FINAL

## SOLUTION OUTLINE

- Create a new website for the ASU Child Development & Research Center.
- Observe the results of this design solution and record it.

## THE DATA

Although we did not go with the social media design solution, we wanted to see if social media would be good at assisting along the new website. When not posted to social media, we had no traffic to the new site. After both team members posted to their Facebook and Instagram stories, the website visits increased from 0 to 15. We decided to post again a week later and saw 23 visitors!

# WEBSITE

<https://chldserv.wixsite.com/mysite>

**FALL IN LOVE WITH THE  
PROCESS AND THE RESULTS  
WILL COME.**

# CONCLUSION

Overall, participating in Acumen's Human Centered Design was a unique experience. Most of the projects I have worked on have been simply making things look good and completing an objective. This felt more like a greater purpose was being served.

I was able to interact with people outside of my regular peers and learned a lot about their situations. Once we completely surrendered to the process, the right solution became more clear as we completed each step.

Creating a more efficient, informative, and easy to use website was our goal. We are both very happy with the resulting website and the possible impact it could make on the ASU Child Development & Research Center.
